Walgreens and Belmont University College of Pharmacy PGY1 Community-Based Pharmacy Residency, Nashville, TN

PGY1 residency programs build upon Doctor of Pharmacy (PharmD) education and outcomes to develop pharmacist practitioners with knowledge, skills, and abilities as defined in the educational competency areas, goals, and objectives. Residents who successfully complete PGY1 residency programs will be skilled in diverse patient care, practice management, leadership, and education, and be prepared to provide patient care, seek board certification in pharmacotherapy (i.e., BCPS), and pursue advanced education and training opportunities including postgraduate year two (PGY2) residencies.

This postgraduate training opportunity for pharmacists enhances their skill set in the community and specialty pharmacy setting. The primary residency practice site is a community-based specialty pharmacy in Nashville, TN. The pharmacy teams service patients with many disease states including oncology, transplant, chronic inflammatory diseases, HIV and HCV. The pharmacists at these sites work closely with providers, patients, and the community to provide optimal drug therapy for patients. In addition, residents gain insights on management issues that can affect the implementation of patient care services in the community and specialty pharmacy setting.

The program is academically affiliated with the Belmont University College of Pharmacy. The pharmacist will complete a teaching certificate program and will assist in teaching opportunities and precepting experiences for the College. Residency program graduates will be leaders in the pharmacy community and will have an active role in advancing community pharmacy practice. A graduate from this residency program would be viewed to possess equivalent experience and skills to seek a pharmacy manager position within a specialty pharmacy location or a traditional community pharmacy practice site.

Residency Activities

- Provide personalized, comprehensive care to patients with complex conditions such as oncology, transplant, chronic inflammatory disease, HCV and HIV/AIDS
- Assist in delivery of medication education to patients
